

Instruction for HW8

Part II. For this part, the functions you may find useful are: *newXMLDoc*, *newXMLNode*.

When creating the root, call it "kml" (rootNode = newXMLNode('kml', ...)).

The basic structure is shown below:

Part II&III. For visualization with Google Earth, try to search “Google earth download” or go to <https://www.google.com/earth/desktop/> to get an older version to load your kml successfully.

Part III. The png files used for this part are zipped in ‘color_label_circle.zip’. Unzip it in the current directory so that the function knows where these files are.
